Who We Are?

DDC Solutions is a global team operating across four time zones, united by a mission to bring clarity, structure, and stability to construction project delivery. Founded by industry practitioners, we've supported 50+ architectural, engineering and construction (AEC) firms across UK and Europe by strengthening their digital workflows, standards, and content systems that work in the high-pressure reality of deadlines, budgets, and BIM coordination.

For us, configuration is strategy. Whether it's templates, workflows, or content libraries, we focus on making the tools you already own work smarter and more efficiently. That philosophy drives every service we deliver.

The **Autodesk Content Catalogue Setup Service** is a direct expression of that ethos.

Our Contributions to the Industry

30+
YEARS OF EXPERIENCE

We've 30+ years of experience with BIM and data-driven 3D modelling. Project delivery is at the core of our interest and expertise.

TRAINING SESSIONS

We've guest lectured on BIM, to empower students gain a better understanding of the new industry standards.

150+
PROJECTS COMPLETED

We've worked with 50+ organisations in the UK and Europe.

PUBLISHED BOOK

We've published a book!

'Project Workshop: A BIM Project delivered in Revit.'

14+
COUNTRIES

We've supported projects in 14+ countries.

EXPERT IN EIR STRUCTURE

We're an expert interviewee in the creation of the industry standard Exchange Information Requirements (EIR) Structure.

RISING STAR OF THE YEAR AWARD WINNER

The DDC Difference

Effective content management starts with your current reality, and that’s where we build from.

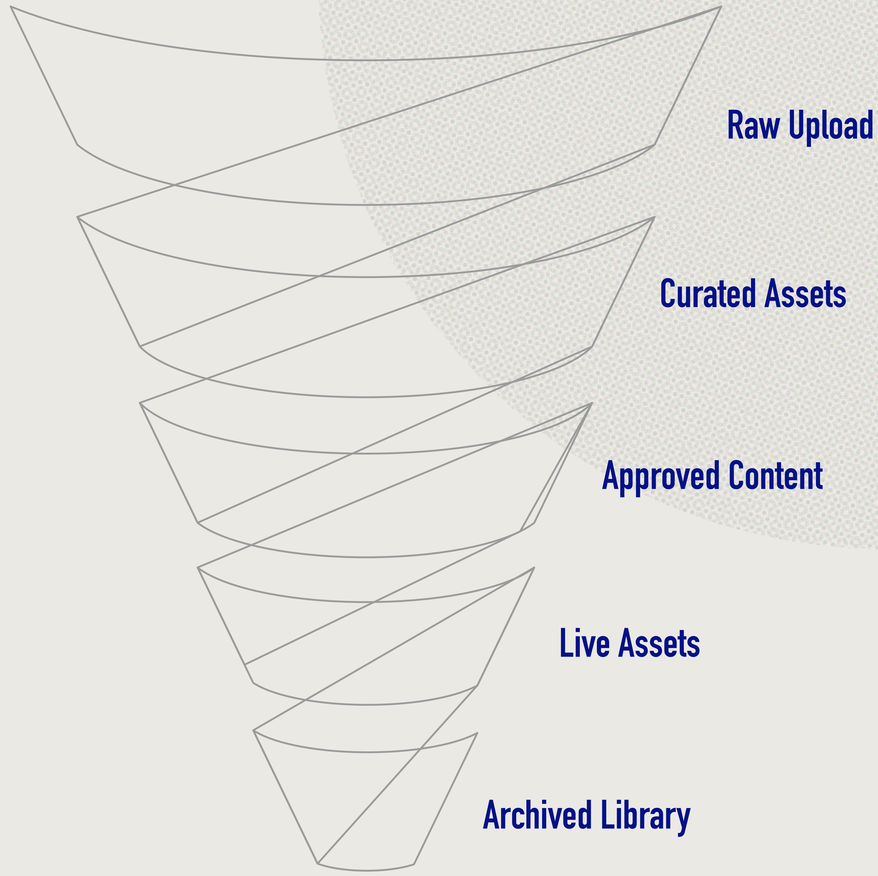

AEC firms often invest heavily in third-party tools to manage Revit content. That adds cost, complexity, and disconnect from your existing workflows. On the other hand, we unlock more value from what you already have: Autodesk’s own built-in, cloud-hosted content catalogue.

We set up Autodesk-native systems to fit the way your projects really flow: efficient, clear, and ready to support your team from the start. There are no bloated workflows, no disruption to your business or culture, just clarity and consistency where it counts.

What sets us apart is not the setup; it’s the thinking behind it.

We don’t see content management as an IT project. We see it as a design productivity upgrade. When your best content is findable, usable, and consistent, your team moves faster without changing how they work.

We don’t add complexity. We remove friction. That’s the DDC difference.

You've Outgrown Folder-Based Content

For years, Revit content libraries were overlooked. Between 2011 and 2018, most practices paid little attention to managing their families. The focus was simply on learning Revit. When firms transitioned from one tool to another, they often found themselves with thousands of families and no plan for what to do next. Only recently, in the past two years, the mindset has shifted. Practices are now taking content seriously; not just because it's being recommended, but because they've realised the value of organised, accessible content.

Here's what the problem of disorganised content looks like in practice:

- Teams waste hours every week searching folders or recreating content they already have.
- Errors and rework increase when outdated or incorrect families, inconsistent errors and outputs make their way into deliverables.
- Remote staff often face delays and frustrations because VPN access can be slow or unreliable, making it harder for them to get the files they need when they need them.
- Folder structures designed for small teams often struggle to support larger, growing project groups, leading to inefficiencies and frustration as projects scale.
- When experienced team members move on, a lot of what they know leaves with them.
- Public tenders and ISO 19650 workflows increasingly encourage traceable, standardised content, and many firms find it challenging to respond with full confidence.

Every instance of duplication, every delay in finding the correct family, and every incorrectly component eats into project time, trust, and profit.

Consider this: Even saving 1 hour per week per designer translates to 50+ hours reclaimed monthly in a 12-person team. That's time that could go to design, not digging through folders.

PlanGrid | AUTODESK. | McKinsey&Company

Cost of Bad/Disorganised Data in Numbers

5.5 Hours Lost Weekly Searching for Project Data

Construction professionals spend over five hours each week just looking for the right project information – unmanaged Revit Content fall into that category.[1]

Construction professionals spend

35%

of time on non-optimal activities.

Only

65%

of their time is spent on optimal activities

14+ Hours lost per person each week that could be spent on priority activities

5.5
Hours/week
Looking for project data/ information

4.7
Hours/week
Conflict resolution

3.9
Hours/week
Dealing with mistakes and rework

Opportunity to maximize time spent on optimal activities

11.2
Hours/week
Project execution and coordination

8.2
Hours/week
Communicating/ interacting with project stakeholders

7.0
Hours/week
Organizing the jobsite

Disorganised Data Erodes Project Profit By Up To 16.5%

Project with $10 million in value could be bleeding up to $1.65 million from bad data, including $0.71 million in avoidable rework.[2]

	$10 Million	Revenue of a $10 Million General Contractor
×	16.5 %	Cost of Bad Data
=	**$1.65 Million**	Cost of Bad Data for a $10 Million Contractor

**$10 million equals £7.4 million.*

It's Hard to Make Good Decisions with Poor Information

43% of organisations struggle to make consistent, high-quality decisions because it's more difficult to make good decisions if you have poor information to base on.[3]

Autodesk Content Catalogue Setup by DDC Solutions

The Autodesk Content Catalogue is already included in your Autodesk AEC Collection, the software bundle that includes Revit, Docs, and other core tools. We just activate it for you.

It offers cloud-based storage for Revit families, parameters, and components out of the box. But without structure, naming conventions, folder logic, or Revit configuration, most teams don't know how to use it effectively.

That means practices are sitting on **powerful functionality they've already paid for,** while still managing content through licensed third-party tools, network drives, cluttered folders, or someone's desktop.

This is where DDC Solutions steps in!

Autodesk Content Catalogue Setup by DDC Solutions is not about buying something new. It's about unlocking what's already in your Autodesk stack and making it work for your team.

It means you don't need to overhaul your process or **pay for additional licenses**; you just need to activate what's already there.

Our service configures the **Autodesk Content Catalogue** to match the way your team works with clean folders, curated libraries, and Revit pointed to the right location from day one. No additional subscriptions. No downtime. No complexity.

Think of DDC Solutions as a partner in managing your BIM content.

Based on our experience, many clients benefit from a cleaner, better-organised Revit library, empowering their teams spend less time searching and more time designing.

Autodesk Content Catalogue Setup By DDC Solutions

For practices ready to centralise BIM content to improve efficiency, our **Revit Library Jumpstart** gives you a fully configured Autodesk Content Catalogue.

We streamline your existing Revit families into a clean, searchable system with cloud-hosted access and built-in structure that reflects how your team works - **all in one day!**

It's a practical, one-time setup that eliminates chaos, boosts productivity, and unlocks the value of the tools you've already paid for.

Here is our initial launch package for a limited time:

Revit Library Jumpstart — £1037 +VAT

Results You Can Expect

The difference is immediate and measurable. When your Revit content is structured, accessible, and aligned with your team's workflow, here's what changes:

Raise Your Standards

Consistent content means consistent documentation. Fewer errors, better outcomes.

Structured Library

Use a structured content library to lead projects confidently, deliver faster, and present with consistency.

No Subscriptions or Recurring Payments

No subscriptions, no surprises. This is a one-time setup that delivers lasting value.

Grow Without Extra Costs

As your projects and teams grow, the system scales seamlessly with you — no need to pay per user for new subscriptions like many other platforms require.

Centralised Content – Single Source of Truth

All your Revit families, templates, and project assets live in one cloud-hosted environment. They are always current and consistent. There are no more duplicates, outdated versions, or guessing what's approved.

Interoperability

Directly integrates with Autodesk tools for faster content consumption during design tasks, making it easier to maintain standardization when working across disciplines and file types.

Reclaim Time

Designers can save time each week that can be better spent focusing on real project work.

Eliminate Rework

No more redrawing details or digging through folders. Content is organised, named, and ready to use.

Win More Work

Structured BIM content strengthens your bids and builds trust with clients and collaborators.

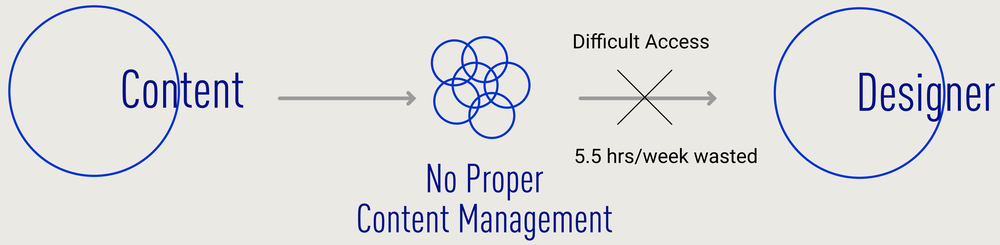

Why We Care?

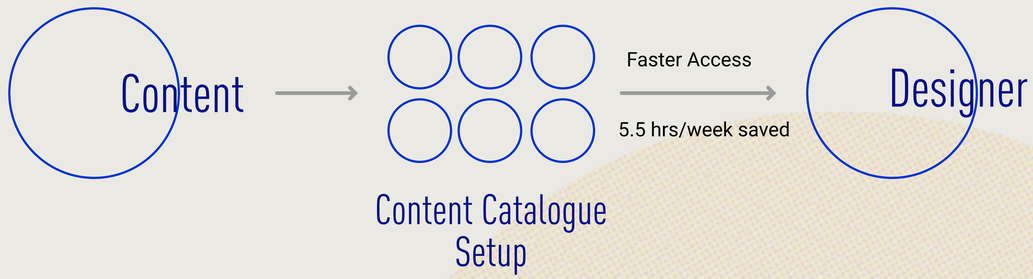

We see what you’re dealing with. We run a business too, and we’ve felt the same Sunday night stress you probably have. It’s that uneasy feeling of knowing the numbers matter but not being able to see exactly where things are drifting off course.

The difference is, we’ve spent years operating in that in-between space where early decisions quietly shape project outcomes. We’ve looked closely at the hidden costs, the misalignments, and the slow leaks that often sit just out of sight. And every time we see them being missed or dismissed, it makes us anxious.

What drives us is the frustration of watching good businesses lose money, not because they’re careless, but because no one gave them the structure to prevent it. That’s the space we want to fix. We’re here to bring order where it’s needed most, to give you visibility early, and to protect your already thin profit margins.

And the Content Catalogue isn’t a big change; it’s just a small tool. But if set up properly it makes a real difference: saving you some time and reducing some risks by giving your team more control. Like everything we do, it’s about creating order where there’s usually chaos.

Words of Appreciation From Happy Clients

Stiff + Trevillion

Before DDC Solutions, our Revit implementation and project mobilisation lacked efficiency, causing delays and inconsistencies. Their expert team streamlined our workflow, provided tailored support, and took on BIM management, allowing us to focus on design. The result: faster project delivery, reduced errors, and a seamless digital process. Highly recommended for any firm looking to optimise Revit workflows.

Piercy&Company

Our Revit setup and project mobilisation lacked structure, causing inefficiencies. So, we approached DDC Solutions. Their expert support streamlined our workflows, optimised modelling, and took on BIM management, improving efficiency and collaboration. A game-changer for our digital strategy—highly recommended.

East Architecture

Managing project mobilisation and modelling without a structured Revit system slowed us down and caused inconsistencies. DDC Solutions optimised our Revit setup and workflows, improving efficiency and clarity across projects.The results have been transformative: faster mobilisation, better collaboration, and fewer errors. We highly recommend DDC Solutions for firms aiming to strengthen their digital processes.

Autodesk Content Catalogue save time and streamline your Revit content.
So, if you have questions, we're here to answer them.
